

DAVID BENARROCH

davidbenarroch1@gmail.com • Madrid, Spain • [linkedin.com/in/davidbenarroch1](https://www.linkedin.com/in/davidbenarroch1)

PROFESSIONAL SUMMARY

Data & AI specialist with 7+ years of experience owning data quality, building analytical pipelines, and applying LLM-based methods in production environments. Strong background in SQL, Python, and statistical validation frameworks, with a track record of ensuring data is clean, trustworthy, and decision-ready across complex cross-functional workflows. Experienced working at the intersection of analytics, AI tooling, and data governance, comfortable context-switching between writing queries, validating models, and communicating findings to compliance, finance, and product stakeholders. Native Spanish speaker, fluent in English, based in Madrid.

PROFESSIONAL EXPERIENCE

Senior Data & AI Analyst | Walmart Global Tech (via Aspectiva) | Israel 2024 – 2026

- Owned end-to-end data quality for a large-scale content classification pipeline, defining validation criteria, building monitoring frameworks, and ensuring data integrity across all stages, from ingestion to production output.
- Designed and deployed LLM-based annotation pipelines in production, leading prompt engineering, model evaluation methodology, and iterative quality improvement cycles in close collaboration with engineering teams.
- Built statistical validation frameworks including Cohen's Kappa agreement metrics, confusion matrices, and precision/recall analysis to audit model performance and flag data anomalies before they reached downstream systems.
- Developed advanced BigQuery SQL pipelines processing large-scale datasets, applying query optimization and data governance standards to ensure traceability and consistency across all reporting workflows.
- Automated data quality checks and recurring analytical workflows in Python (pandas), reducing manual effort and enabling continuous monitoring across classification and content evaluation pipelines.
- Collaborated directly with product, compliance, and operations stakeholders to define data quality thresholds, document analytical methodologies, and communicate findings in clear, audit-ready formats.
- Worked with AWS S3 for cloud data storage and retrieval within the broader data pipeline infrastructure.

Data Analyst | Moroccanoil | Israel 2022 – 2024

- Owned commercial and brand performance data across multiple markets, building end-to-end reporting workflows from raw data extraction and cleaning to structured, audit-ready dashboards for leadership.
- Maintained data integrity and documentation standards across reporting cycles, flagging anomalies and ensuring analytical outputs were accurate, traceable, and consistent over time.
- Supported data governance initiatives by documenting business logic, data definitions, and pipeline methodologies, making analytical assets reusable and reliable across teams.

Data Analyst | Skai (formerly Kenshoo) | Israel 2018 – 2022

- Delivered marketing analytics and performance diagnostics for enterprise clients, building automated reporting pipelines and KPI frameworks in SQL and Python that reduced manual data preparation time significantly.
- Conducted deep-dive investigations into traffic patterns, conversion anomalies, and A/B test outcomes, proactively surfacing data quality issues and inconsistencies before they impacted client reporting.
- Maintained data governance standards across reporting workflows, standardizing metric definitions and ensuring consistency in how KPIs were calculated and communicated across teams.
- Collaborated cross-functionally with product, account, and engineering teams to define measurement approaches and deliver findings to stakeholders at varying levels of technical sophistication.

Account Manager & SDR | Tipsi | Madrid, Spain 2017 – 2018

- Ran end-to-end SaaS sales cycles independently for a B2B hospitality tech platform, from prospecting to demo to close, averaging 8 to 12 new accounts per month.
- Conducted solo product demos tailored to each prospect's operational context, translating technical features into concrete business value for non-technical buyers.
- Managed pipeline and forecasting in Salesforce CRM across all active opportunities.

SKILLS & TOOLS

Data Quality & Governance: Data validation frameworks, anomaly detection, audit-ready reporting, traceability, metadata documentation, data integrity standards

AI & LLM Tooling: LLM pipeline engineering, prompt engineering, model evaluation and validation, anomaly detection, compliance automation exposure, AI-assisted workflows

SQL & Data Engineering: BigQuery (advanced SQL), query optimization, pipeline development, large-scale dataset processing, data governance

Programming & Analytics: Python (pandas, numpy, scipy), statistical modeling, Cohen's Kappa, precision/recall, A/B testing, automation scripting

Cloud & Infrastructure: AWS (S3, cloud storage tooling), BigQuery cloud environment, pipeline deployment in cloud-based data stacks

Languages: Spanish (native, C2) • English (fluent, B2+) • Hebrew (working proficiency)

EDUCATION

Bachelor in Business Administration Universidad Autónoma de Madrid

Madrid, Spain
